

Dent Mobile L[®]

The mobile dent repair system for vehicles

PIVAB[®]
THE ART OF SPRAY BOOTH

Dent Mobile L[®]

Dent Mobile L is a great solution for those who want to supplement their existing facility with a mobile, flexible system for minor damage on vehicles.

The product consists of 2x mobile units, 1x Supply air unit and 1x Exhaust air unit.

The Dent Mobil L is used by placing the units on either side of the planned repair area and then creating a flow of air over the object while the damage is being repaired.

The spray paint station takes little space and can easily be put away when you do not need to use it. It is so smart and flexible that you can take the Dent Mobile L with you to carry out a job on the customer's premises. The Supply air can be taken from the premises while the exhaust air must be expelled from the premises. Duct connection dim. 315mm.

(Note that these should be placed max 2m from each other for optimal function.) In order to extend the distance and retain the function, it is possible to wrap the object with the units.

DIMENSIONS, DENT MOBILE L - (SAME FOR BOTH UNITS)

Depth ext	850 mm
-----------	--------

Width ext	1530 mm
-----------	---------

Height ext	1320 mm
